### **DETAILED ACTION**

Applicants' arguments, filed 4/28/03, have been fully considered but they are not deemed to be persuasive. Rejections and/or objections not reiterated from previous office actions are hereby withdrawn. The following rejections and/or objections are newly applied. They constitute the complete set presently being applied to the instant application.

#### **Title**

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed. The presently pending claims are only directed to systems whereas, in contrast, the title includes both systems and methods.

#### **Vagueness and Indefiniteness**

Claims 22-35 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In the last two lines of claim 22, the phrase "the conductive solution current" lacks clear antecedent basis as to the presence of such a current. Clarification via clearer claim wording is requested. This rejection also applies to claimed directly or indirectly dependent from claim 22 due to their respective dependencies.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35

U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 1-11, 15-19, 36-53, and 56-73 are rejected under 35 U.S.C. 102(b) and

(e)(2) as being clearly anticipated either by Stettner et al. (P/N 5,696,577) or Wertz et al. (P/N 4,448,534).

Stettner et al. summarizes the invention in the abstract as being directed to imaging of light transmitting or reflecting objects in a biological tissue which is deemed a solution including charged biological materials. This is further supported in column 1, lines 15-33, wherein discussion of fish, reefs etc. is disclosed as such radar sampling targets. The BRIEF DESCRIPTION OF THE PRESENT INVENTION section in column 3, line 66, through column 4, line 2, connects the invention usage to said column 1 descriptions. The array of Stettner et al. utilizes unit cells with row and column selectors for addressing, including shift register memory, as disclosed in column 5, lines 43-67, as also required in the instant invention. The outputs of these registers for row and column

Art Unit: 1631

selection generates variable current depending on which row and/or column is selected as required in instant claim 11, for example. Therefore, the instant claims as listed above are anticipated.

Similarly, Wertz et al. summarizes the detection of drugs and microorganisms in the abstract via wells in an array as is also disclosed in column 15, lines 1-27. Also, similar to the above reference, row and column selection circuitry is disclosed in column 16, lines 32-66. Therefore, the instant claims as listed above are anticipated.

### **Claim Objections**

Claims 12-14, 20, and 21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

No claim is allowed.

Papers related to this application may be submitted to Technical Center 1600 by facsimile transmission. Papers should be faxed to Technical Center 1600 via the PTO Fax Center located in Crystal Mall 1. The faxing of such papers must conform with the notices published in the Official Gazette, 1096 OG 30 (November 15, 1988), 1156 OG 61 (November 16, 1993), and 1157 OG 94 (December 28, 1993)(See 37 CFR § 1.6(d)).
